

Implement prim's algorithm.

```
INF = 999999
graph = [
    [0, 2, 3, 0, 0],
    [2, 0, 1, 4, 0],
    [3, 1, 0, 5, 6],
    [0, 4, 5, 0, 7],
    [0, 0, 6, 7, 0]
]

vertices = len(graph)
selected = [False] * vertices
selected[0] = True

print("Edges in Minimum Spanning Tree:")

total_cost = 0

for _ in range(vertices - 1):
    minimum = INF
    x = 0
    y = 0

    for i in range(vertices):
        if selected[i]:
            for j in range(vertices):
                if not selected[j] and graph[i][j] != 0:
                    if graph[i][j] < minimum:
                        minimum = graph[i][j]
                        x = i
                        y = j

    print(x, "--", y, "=", graph[x][y])

    total_cost += graph[x][y]
    selected[y] = True

print("Minimum Cost =", total_cost)
```

```
Edges in Minimum Spanning Tree:
0 -- 1 = 2
1 -- 2 = 1
1 -- 3 = 4
2 -- 4 = 6
Minimum Cost = 13
```
